# PROMISE FOR OUR PLANET

# OUR PROCESS

- User
- VERYWORDS

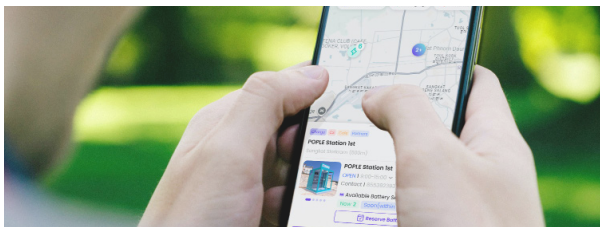

VERYWORDS automatically collects API-based data from e-mobility IoT devices during the manufacturing, production, and sale of e-scooters.

The collected data is used as key information for calculating the reduction amount, and it is recorded on the blockchain and issued as NFTs.

---

## ECO PLATFORM

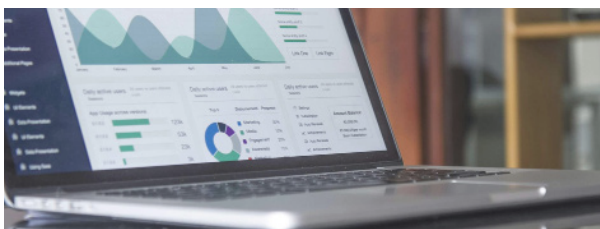

POPLE World is a platform provided by VERYWORDS that allows users to conveniently enjoy carbon-neutral rides by managing e-scooters and locating stations.

Additionally, it serves as a hub for promoting various greenhouse gas reduction projects, working to accelerate the transition to a carbon-neutral society.

---

## BLOCK-CHAIN TRANSACTION

VERYWORDS has implemented a carbon reduction trading and monitoring system based on blockchain technology to help governments, businesses, and individuals effectively manage and trade their carbon emissions.

Through this system, carbon reduction efforts become more visible, fostering real carbon emission reductions and contributing to environmental protection.

---

## E-MOBILITY

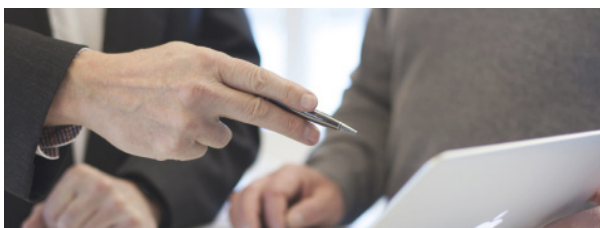

VERYWORDS promotes e-mobility by offering users opportunities to reduce carbon emissions through e-mobility research, development, and production.

In addition, we are expanding the renewable energy sector by providing high-performance batteries and convenient battery Swap charging stations for users.

---

## CONSULTING

We offer consulting services for policy development and mid- to long-term strategy planning to help governments, businesses, and citizens effectively respond to climate change.

We provide consulting both domestically and internationally on energy efficiency, energy management, and environmental management to address climate change and environmental issues.
